1.Introduction

1.1 About This Handbook

This handbook provides comprehensive guidance for all users of the Brinks AI Security Monitoring Platform. It is structured by role so that each user can quickly find the information most relevant to their responsibilities. Whether you are a Super Administrator managing the entire system, an Analyst reviewing utilization reports, or an Operator monitoring live events, this guide covers every feature available to you.

1.2 About the Platform

The Brinks AI Security Monitoring Platform is a role-based web application built on React with Azure Active Directory authentication. It provides real-time visibility into branch operations, teller workstations, camera feeds, and AI-detected security events across all Brinks locations.

Core capabilities of the platform include:

- Live camera feed monitoring with Region of Interest (ROI) configuration
- AI-powered event detection and alert management
- Teller and workstation utilization analytics
- Multi-level location hierarchy: Country → State → City → Branch → Workstation
- Role-based access control with Microsoft Azure SSO
- Power BI-embedded reporting dashboards
- User and role lifecycle management

1.3 Technology Stack

Component	Details
Frontend	React 19, TypeScript, Vite
UI Library	PrimeReact 10
Authentication	Microsoft Azure AD (MSAL)
HTTP Client	Axios
Routing	React Router v7

1.4 Roles Overview

The platform supports three distinct user roles, each with a carefully scoped set of permissions:

Role	Permission
Supervisor	Full system access — Manages Users, Event Dashboard, Camera Management, Opti view, Utilization Report.
Branch Manager	Manage users, Event Dashboard, Opti view, Utilization Report.
Claim Associate	Event Dashboard, Opti view, Utilization Report.

2. Getting Started

2.1 System Requirements

The Brinks platform is a browser-based application. No software installation is required on your workstation. The following browsers are supported:

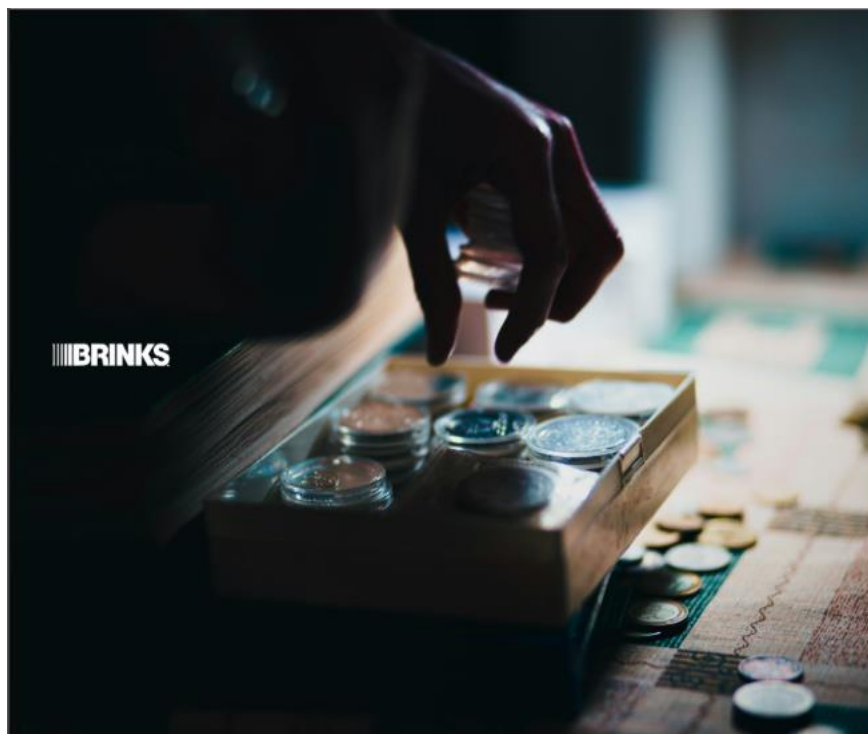

- Google Chrome (recommended) — version 110 or later
- Microsoft Edge — version 110 or later
- Mozilla Firefox — version 110 or later

2.2 Logging In

Authentication is handled via Microsoft Azure Active Directory (Azure AD). You must have a valid Brinks corporate Microsoft account to access the platform.

Steps to log in:

1. Open your browser and navigate to the Brinks platform URL provided by your administrator.
2. Click the Sign in with the Microsoft button on the login page.
3. Enter your Brinks corporate email address and password in the Microsoft login dialog.
4. If prompted, complete Multi-Factor Authentication (MFA) using your registered method.
5. Upon successful authentication, the system verifies your role and permissions, then redirects you to your role-specific home dashboard.

Copyright © 2025 BRINKS and its related entities. All Rights Reserved.

2.3 Navigating the Interface

The platform uses a consistent layout across all roles:

UI Element	Description
Top Navigation Bar	Contains the Brinks logo, current username, role badge, and logout
Left Sidebar Menu	Role-aware navigation links — only items available to your role are shown
Main Content Area	Displays the active page; data tables, forms, dashboard, and camera feeds appear here
Footer	Displays the current version.

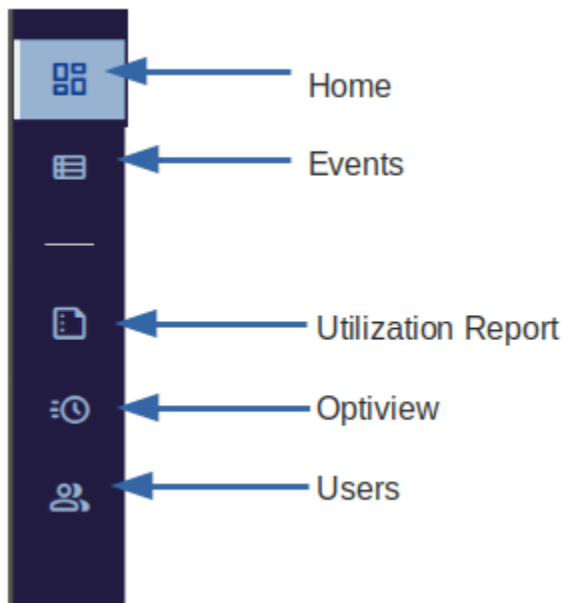

3. Branch Manager

3.1 Role Overview

The Branch Manager role is designed for on-site or regional managers who need operational visibility without system administration privileges. Branch Managers can monitor their branch's security events, teller performance, and workstation productivity. They interact primarily with the Events, Utilization, and Dashboard modules.

3.2 Sidebar

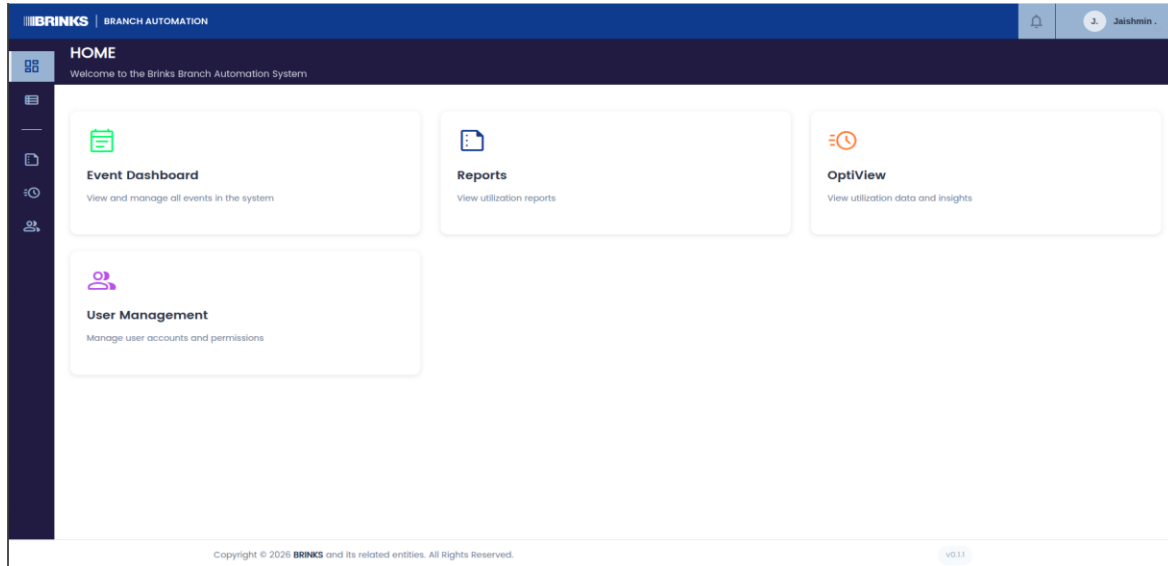

Branch Manager has access to Events, Utilization Report, user and Opti view in the sidebar.

3.3 Dashboard

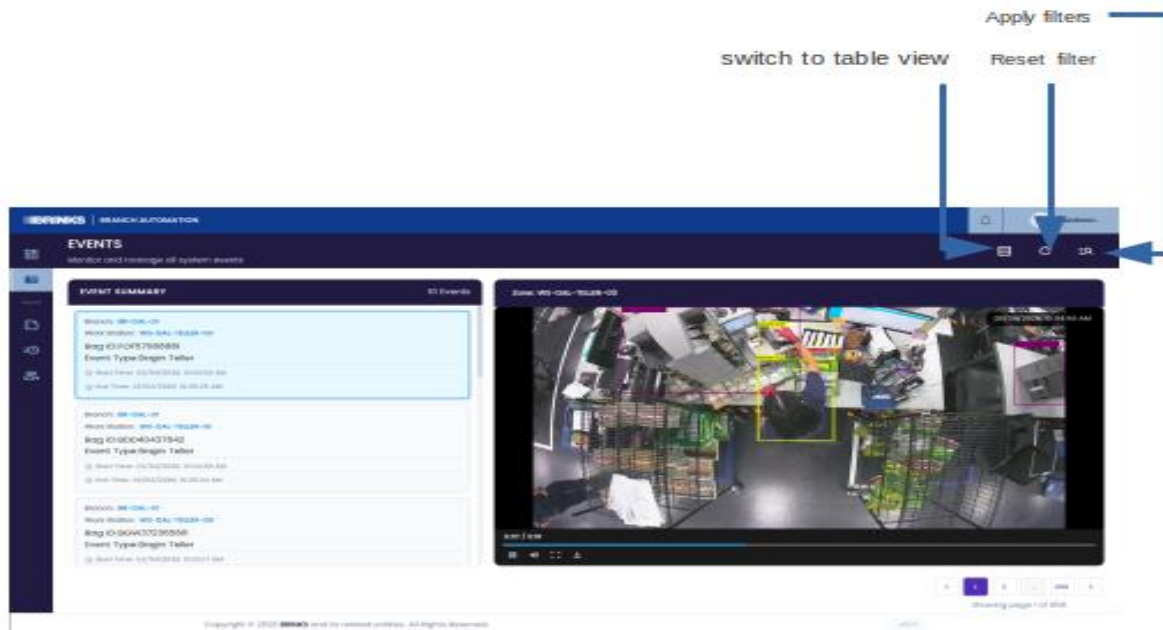

Upon login, the Branch Manager is presented with a global dashboard showing system-wide KPIs:

- Total active branches and workstations across all locations
- Total AI-detected events today vs. last 7 days
- Recent user login activity
- Quick-access tiles for each major module

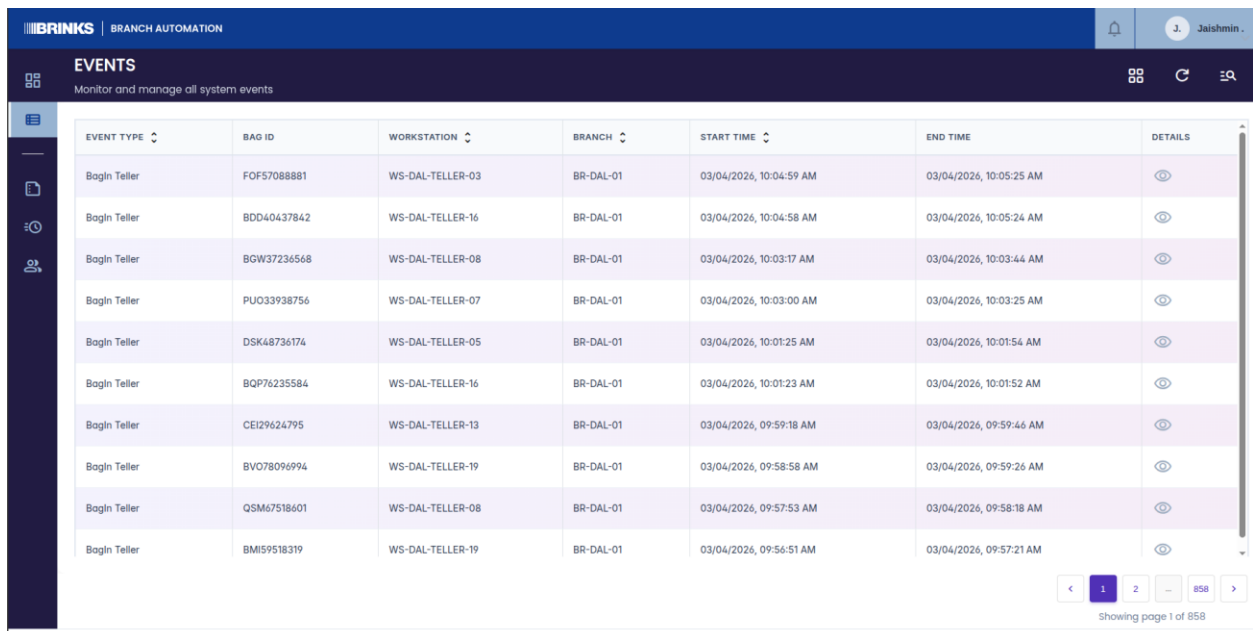

3.4 Event Management

Navigate to Events by Sidebar or from Event dashboard tile from landing page. Branch Manager can view all AI-detected events across the entire system with full filtering and export capabilities.

3.4.1 Switch to table view

Click on the switch to the table view button from header to see the event details in table view. This shows: Event Type, Bag Id, Branch, Workstation, Start time, End time, Evidence Video in Detail Column.

EVENT TYPE	BAG ID	WORKSTATION	BRANCH	START TIME	END TIME	DETAILS

3.4.3 Reset Filters

Click on the reset filter button from the header to reset the filters.

3.4.4 Event Detail

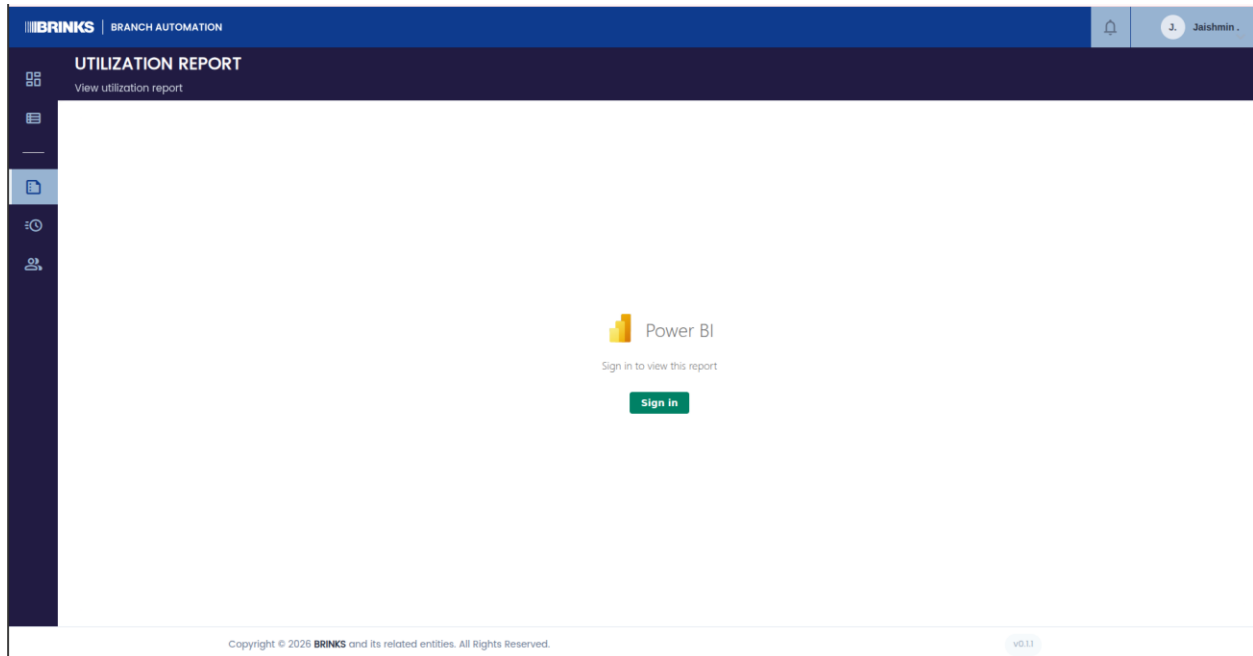

Click on the eye icon from the detail column to see the evidence video with the details of that event.

The screenshot shows the BRINKS Branch Automation Events table. A blue arrow points to the eye icon in the Details column of the first row, which corresponds to the event with Bag ID FOF57088881.

Below the table, a detailed view of the event is shown. The Event Details window displays a video feed of the event, along with the following information:

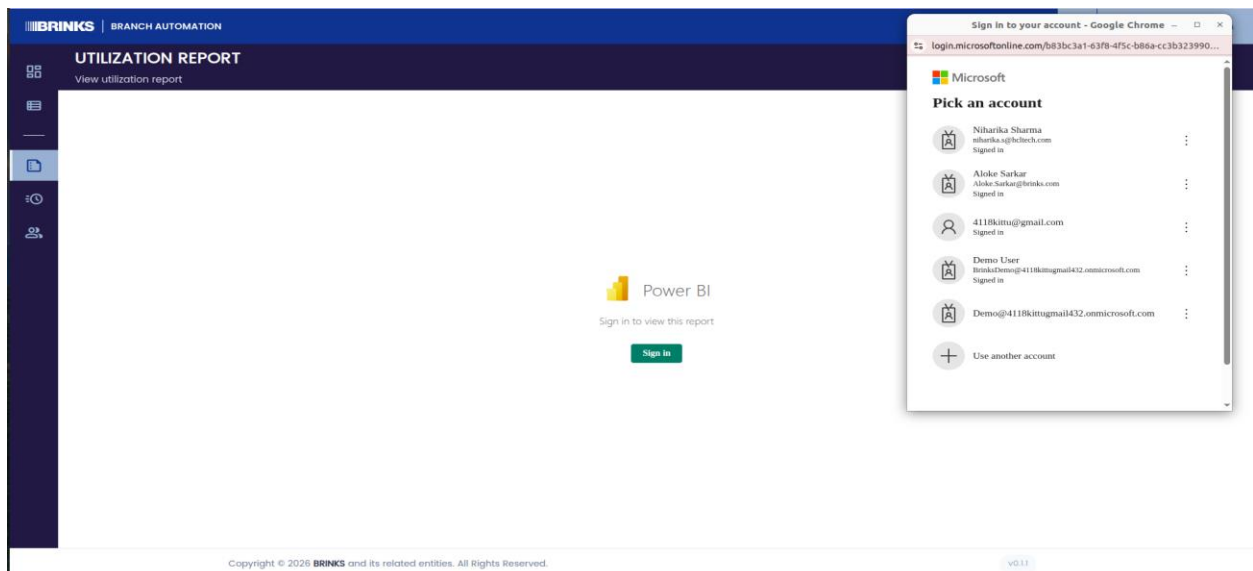

- Workstation: WS-DAL-TELLER-03
- Bag ID: FOF57088881
- User Code: kagin teller
- Start Time: 03/04/2026, 10:04:59 AM
- End Time: 03/04/2026, 10:05:25 AM

3.5 Utilization Report

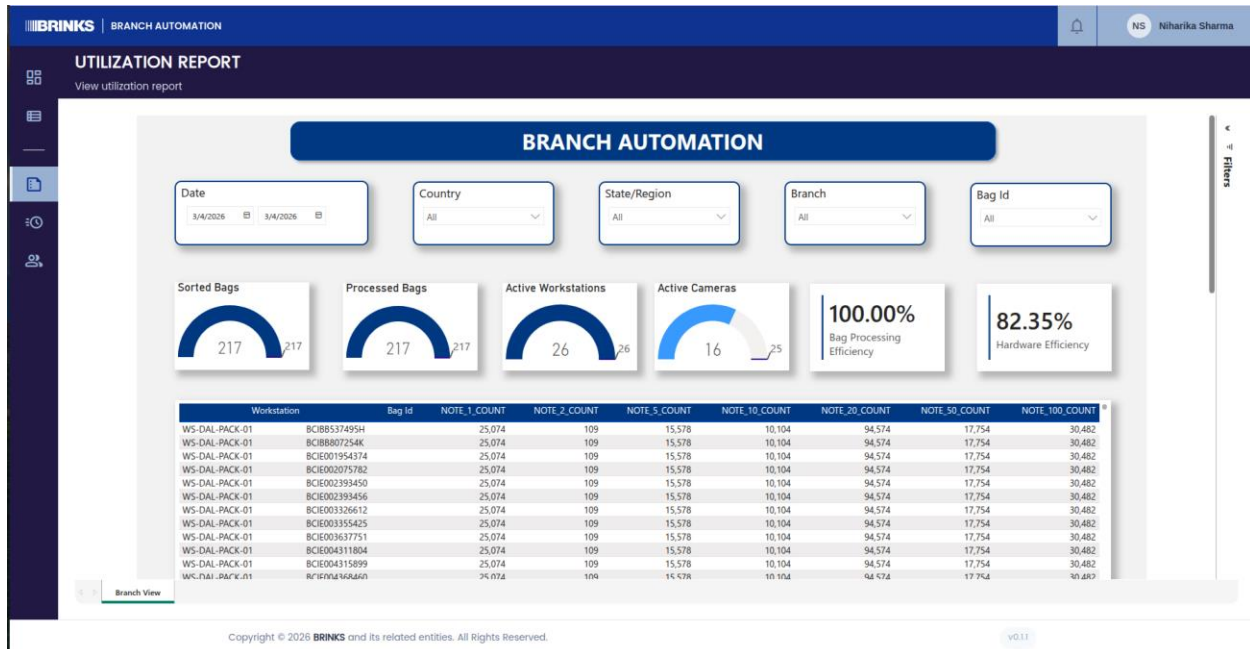

3.5.1 Access Utilization Report

Navigate to the Utilization Report module from the left sidebar to open the Branch Automation utilization dashboard. Click on the “Sign in” button to authenticate and access the report.

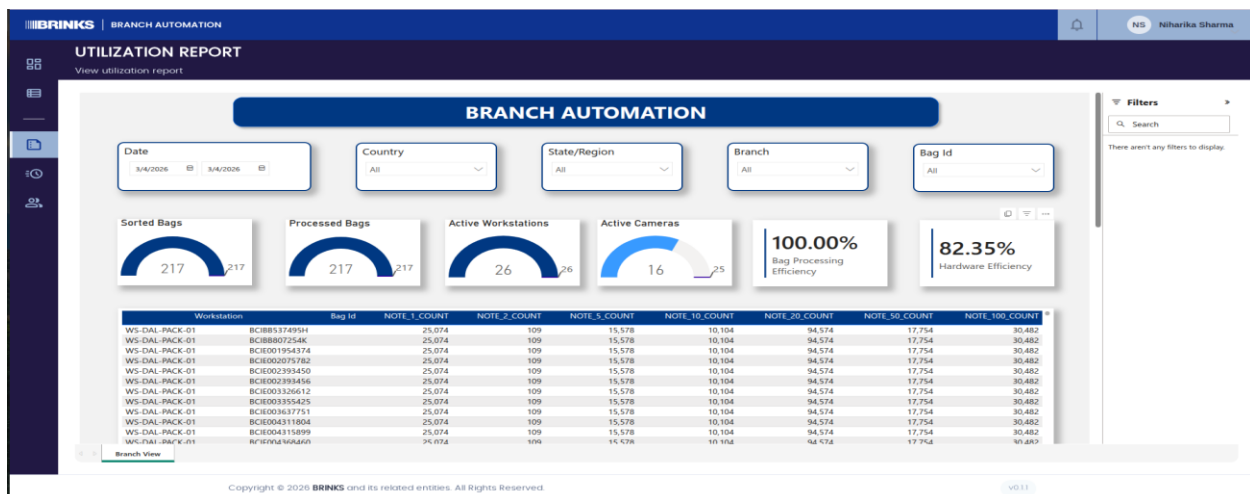

3.5.2 View Utilization Report

After successful login, the dashboard is displayed showing a consolidated view of utilization and performance metrics.

3.5.3 Apply Filter

Users can filter the report data using Date range, Country, State/Region, Branch, and Bag ID to refine the displayed information.

3.5.4 View Summary Metrics

The dashboard presents key metrics such as Sorted Bags, Processed Bags, Active Workstations, Active Cameras, Bag Processing Efficiency, and Hardware Efficiency.

3.6 Optiview

Navigate to the Optiview module from the left sidebar to open the Optiview dashboard.

3.6.1 Workstation Optiview

Click on the toggle of Workstation from header to view the workstation details.
